

# Mountain Spoke Lengths Page 1 - Current (2012)

Spoke lengths are calculated using American Classic nipples. If you are using any nipple other than American Classic nipple, you **MUST** subtract 2mm from the length listed below. If wheels have brass nipples, do not subtract 2mm from length listed below. Please **NOTE**: MTB front hubs Disc 130 (QR, 15mm Thru-Axle, and 20mm Thru-Axle) all have the same hub flange and spoke circle diameter, therefore they are the same spoke length. Spoke lengths are the same for PowerTap rear hubs. **American Classic does not sell individual nipples, spokes or rims.**
